OZEE FINANCE

WHITEPAPER

The new generation of DeFi

TABLE OF CONTENTS

1. What is DeFi?

DeFi as we all call it which is the abbreviation of the phrase Decentralized Finance which in general refers to the digital assets and finance, protocols and decentralized applications (DApps) built on Ethereum blockchain.

2. DeFi Ecosystem

Decentralized Finance (DeFi) has added great value to the mass adoption of cryptocurrency and so many people have benefited from the tools being built to keep things going smoothly. Products such as yield farming, staking, swap dex and an ecosystem of lending and borrowing has added value to every investment made in the DeFi ecosystem thus increasing the adoption of decentralized services. This has helped more people come in and develop new products and services.

3. Ozee Finance Ecosystem

The DeFi ecosystem today consists mainly of yield farming, staking dApps, decentralized exchange of tokens, as well as collateralization of digital assets to provide lending and borrowing services. The goal is to make the world decentralized so as to provide investors with interest. What if it was possible to bring all these features into one? This is why we created Ozee Finance - a

decentralized payment platform that integrates staking and an ecosystem for swapping of tokens. We intend to create an ecosystem where every investors gain interest on their investment made. With the creation of ZEE wallet, we would be bringing all our services together in one application to help individuals store their tokens, send, swap and gain weekly rewards for holding. We believe in simplicity and efficiency, hence the team will always work to provide the best use case for our token.

4. Ozee Token

Ozee is a decentralized ERC-20 token governed by the Ethereum blockchain. ZEE tokens will be used to interact with our ecosystem applications. It will not be mintable with a total supply of 100,000.

"ZEE" is the governance token of our ecosystem

"ZSP" is the reward token of our ecosystem

More information about "ZSP" token would be provided by our team when our swap dex goes live.

5. Project Goals

With the support of our community, these are the goals we plan to achieve in the long run:

- Add to the adoption of DeFi protocols.

- Provide a rug-free decentralized token.

- Create a more user-friendly environment.

6. Project Tokenomics

- Token Name: Ozee Finance

- Ticker: ZEE

- Token Type: ERC-20

- Total Supply: 100,000

- Token Sale: 40%

- UniSwap Liquidity: 20% (permanently locked)

- Farming and Staking: 30%

- Marketing: 7% (to be used for promotions to increase awareness)

60% of ETH raised from the pre-sale would be locked in UniSwap to provide liquidity for trading.
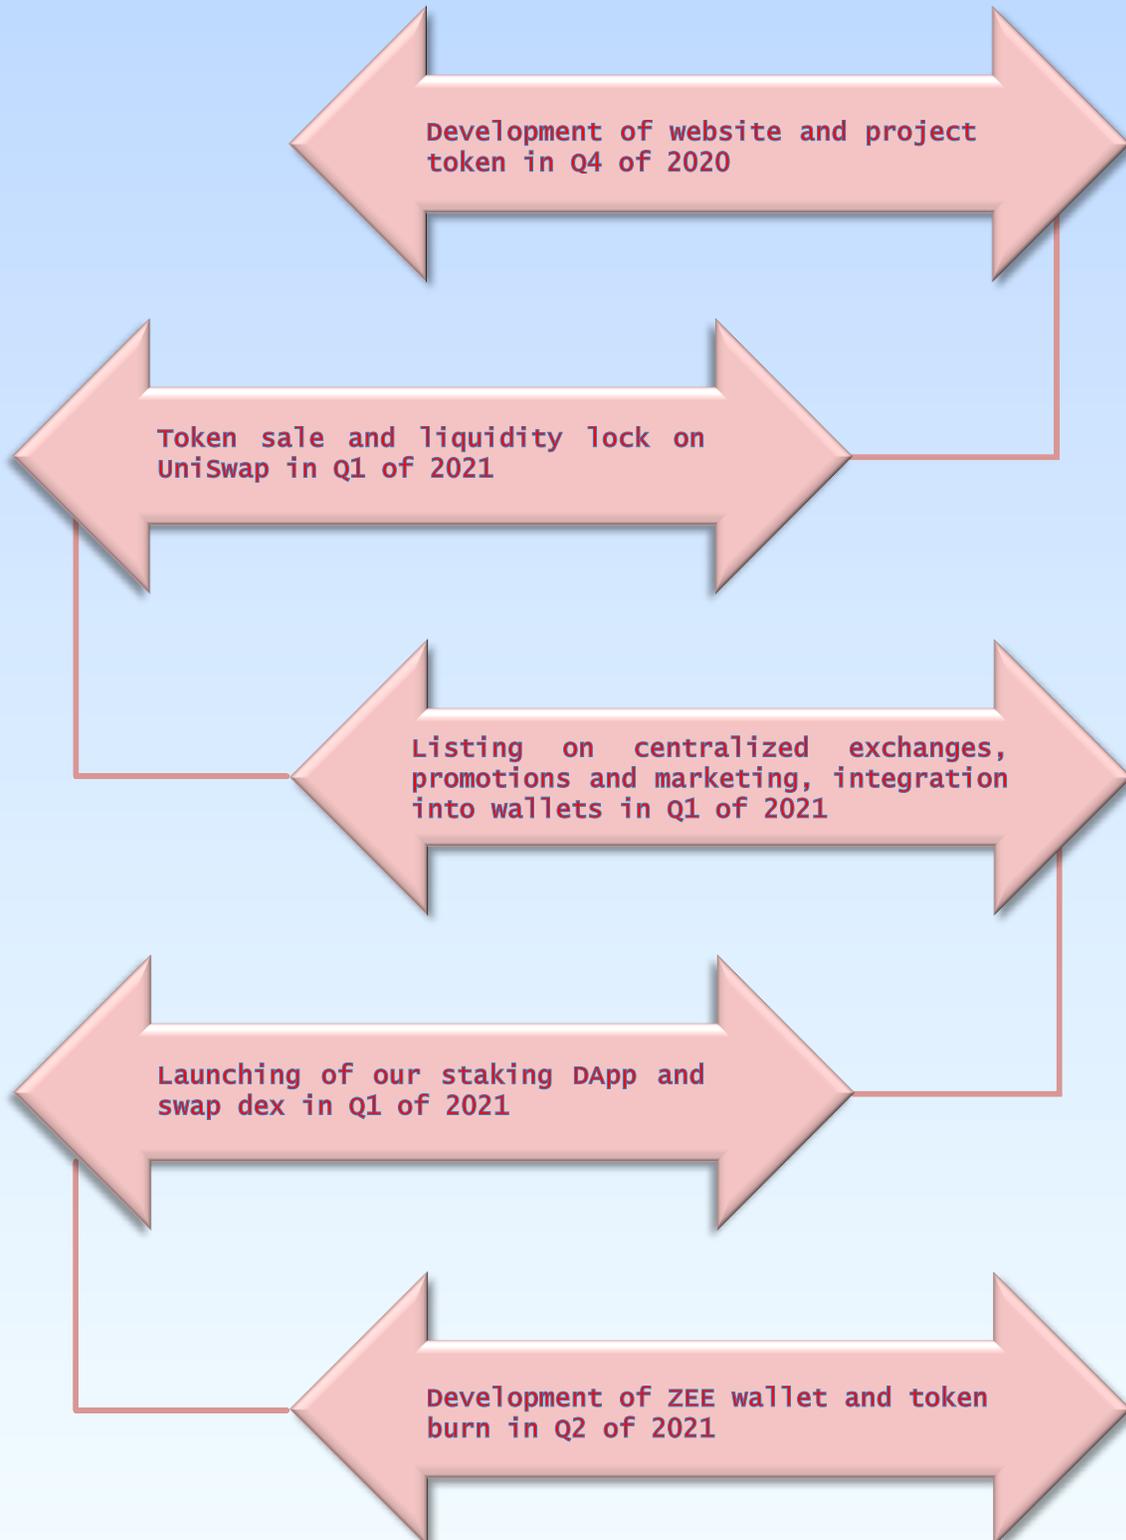

7. Marketing

We are currently working with content creators, crypto influencers, and youtubers to help promote and increase the awareness of our project ecosystem. We plan to list on centralized exchanges and also integrate our token into different wallets.

8. Road Map

For a project to be successful, it requires a well-crafted plan that ensures that objectives are met on time. In line with this, our road map is outlined below:

Project
Road Map

PROJECT NAME: ZEE

Development of website and project token in Q4 of 2020

Token sale and liquidity lock on UniSwap in Q1 of 2021

Listing on centralized exchanges, promotions and marketing, integration into wallets in Q1 of 2021

Launching of our staking DApp and swap dex in Q1 of 2021

Development of ZEE wallet and token burn in Q2 of 2021
